

**Don't let janitors clean your data center!
Improper cleaning methods harm
equipment & infrastructure.**

We use specialized procedures and equipment to safely clean data centers.

We use vacuums which are specially engineered for cleaning IT equipment. Class 1, ULPA filtered cleanroom with certified 0.12 filtration as well as EMF shielding and digital switching to prevent EMF interference.

During cleaning operations we monitor levels of air particulates using laser particle counters.

We use filtered ionized air to gently remove particle contamination from static-sensitive surfaces.
